The Rinia range of aluminium profiles protect the tape from the environment, work as a heat-sink for optimum LED performance, as well as controlling and diffusing the light output. The aluminium is anodised and the cover is supplied in frosted as standard. Popular with our commercial clients are the custom RAL finishes. The profiles come in two meter lengths as standard and can usually be delivered next day to site. The production team can cut profiles to size, provide custom length fly leads and deliver complete fittings to site ready for installation.

## LIGHTING

**Step 1:** Cut flex tape down to size on the nearest dotted cutting line.

**Step 2:** Place the clear end cap onto the flex tape. (The side with the groove should be facing upwards, and at the end.)

**Step 3:** Pull down to make room for other accessories.

**Step 4:** Place the metal prongs in between the copper and the LED.

**Step 5:** Place the holding clip in line with the silicone. (The end with the clip facing outwards)

**Step 6:** Now attach the Join Clip.

**Step 7:** Press together until clipped in securely.

**Step 8:** Complete the seal by sliding the clear end cap back until clipped in place.
